

Your Home

We take great pride in our homes. They reflect our taste, our values and are the primary source of security for our families.

We strive for the highest quality in our furnishings, are conscious of ensuring we have energy saving appliances and electronics and no home would be without the peace of mind of a smoke detector.

Yet the one area of our homes that touches and nourishes us more than any other, we too often neglect...that is the quality of the water we drink and prepare our food with.

Water touches us every day and in every way; for drinking, cooking, preparing fruits and vegetables, brushing our teeth and drinking water for our pets.

So when it comes to our water, why settle for anything less than an Everpure drinking water system, the only commercial grade solution for your home.

Water is a critical component to wellbeing. And healthy, good tasting tap water is increasingly rare these days. Installing a high quality, NSF-certified drinking water system is quite possibly the most important home improvement we can make.

a system unrivaled

Drinking water systems refine our water, stripping contaminants and bad taste, so all that remains is the pure basis for our drinking and cooking – and our health.

Everpure is the only truly commercial-grade drinking water system available for the discriminating homeowner. Designed specifically to meet the high standards of the restaurant industry, its proof positive that water sustains life, but Everpure sustains a lifestyle.

Everpure water simply tastes better. Everpure uses an exclusive Precoat filtration process removing contaminants, yet retaining vital minerals found naturally in water. So our water is as healthy as it tastes.

the responsible solution

The growth of our cities and towns, the aging state of our water mains, and pollution of rivers, lakes and streams has resulted in a

deteriorating state of our fresh water supply, continuing to seriously threaten the health of our population,

Our systems polish water so that it is sparkling and free of unwanted tastes and odours. They reduce lead amounts below Federal guidelines, as well as parasitic protozoan cysts and other microscopic particles that may be in our water supply.

the convenient solution

Unlimited water at your finger tips means never running out of water again.

At only pennies per day, the system is less expensive per glass than bottled water, about 1/10th of the cost and provides an environmentally friendly alternative to bottled water.

Our systems are easily installed using common household tools. They mount under your sink and are plumbed to a separate faucet and any other appliance, such as a refrigerator or built-in coffee/espresso maker. Annual cartridge replacement is easy too, just like changing a light bulb.

peace of mind

Backed up with the best warranty in the business, Danamark WaterCare provides a lifetime of product confidence and 100% customer satisfaction – guaranteed.

All Everpure Drinking Water systems are third party certified to the highest standards by the National Sanitation Foundation (NSF) providing you with the assurance and quality you deserve and expect.
