

## Your Water...

The growth of our cities and towns, the aging state of our watermains, and pollution of rivers, lakes and streams has resulted in a deteriorating state of our fresh water supply, continuing to seriously threaten the health of our population.

All tap water may contain unwanted particles and contaminants such as dirt, rust, chlorine, lead, sulphur and bacteria, regardless of where you live or how you live.

Danamark WaterCare provides a complete line of water filtration systems for all areas of your home. Our state-of-the-art commercial grade water filtration technology results in 99.9% (highest standard possible) of ALL contaminants being eliminated from your water – resulting in the *cleanest, purest, freshest water available*.

All Danamark filtration systems come with National Sanitation Foundation (NSF) Certification, the highest quality standard in the industry. Since 1975, Danamark WaterCare has been supplying commercial grade water filtration systems to Canada's leading foodservice and restaurant companies. We are now bringing this technology to your home.

Water touches us every day and in every way; for drinking; cleaning fruits and vegetables, dishes and utensils; washing food preparation areas, kitchen and bathroom countertops; showering, bathing, brushing teeth, washing infants and our children; and drinking water for pets.

The single investment in a Danamark Water Filtration System protects the most common element of your everyday living; water...for the safety of your most important asset; your family's health.
